Com android support appcompat v7 28

Failed to resolve com.android.support appcompat-v7 28. Failed to resolve com.android.support appcompat-v7 28.0.0.

Solution 2: Add the following code to the build.gragle (project) to add the Google Maven repository all projects { submissions { ... maven { url name Google } ... } } Solution 3: some people who may still have problems like me (for IRANIANS and all those who have penalties) this bug can be fixed with the proxy I used this free proxy for Android Studio 3.2 just go into the settings (Ctrl + Alt + S) and find the HTTP proxy and then check the manual configuration of the proxy, then add fodev.org for the host name and 8118 for the port number Solution 4: As @Sourabh pointed out, you can see which packages Google has listed via the Google Maven link. Solution 1: 28.0.0 is the final version of the supporting libraries. android { compileSdkVersion 28 buildToolsVersion 28.0.3 (HERE) defaultConfig { applicationId com.example.truecitizenquiz minSdkVersion 14 targetSdkVersion 28 versionCode versionName 1.0 testInstrumentationRunner android.support.test.runner.AndroidJUnitRunner } buildTypes { release { minifyEnabled false proguardFiles getDefaultProguardFile('proguard-android-optimize.txt'), 'proguard-rules.pro' } } } dependencies { implementation fileTree(dir: 'libs', including: ['*.jar']) implementation 'com.android.support:appcompat-v7:28.0.0' (HERE) implementation 'com.android.support.constraint:constraint-layout:1.1.3' testImplementation 'junit:junit:4.12' androidTestImplementation 'com.android.support.test:runner:1.0.2' androidTestImplementation 'com.android.support.test.espresso:espresso-core:3.0.2' } Solution no. A window appears where you can manage your build version (compileSdkVersion) and your build version (buildToolsVersion). For an alpha appcompat, version 28.+ makes more sense. To see the exact distribution of the versions, check the Show package details checkbox. How can I solve this problem? 8: Make sure your version of buildTools is compatible with the compact version of the application. To use the latest Android libraries, switch to AndroidX Edit. Versions 28.0.0-rc02 and 28.0.0 are now available. If, like me, you receive a message similar to this Failed to resolve: com.android.support:appcompat-v7:28.0, you may have gotten there after updating targetSdkVersion or compilingSdkVersion. Basically, the package is not as indicated in the post. Do you have any idea how to fix the problem? I'm new to Android Studio, I tried everything to solve this problem "Failed to resolve: com.android.support:appcompat-v7:28.+ " I tried to clean project, invalidate cash/restart and removing .idea and still the same I'm using android studio 2.2.1 for a learning reason, and I updated it to android studio 3 and there a multiple rendering problems so I returned back to version 2.2.1 I tried to add maven { url 'name 'Google' } So, It stuck with another problem "Error: Execution failed for task ':app:processDebugResources'. gradlew -q app:dependencies This will correct the error. 7: Implementation com.android.support: appcompat-v7:28.0 Implementation com.android.support: support-media-compatible 28.0.0 Implementation com.android.support: support:encouragement-v4:28.0.0 Implementation com.android.support: design:28.0.0 Implementation com.android.support:recyclingview-v7:28.0.0 Implementation com.android.support:cardview-v7: 28.0.0 Implementation com.android.support:encouragement-v4: 28.0.0 1C10 Implementation com.android.support:cardview-v7: 28.0.0.0 The packages have now been found and downloaded. I've already added Maven, but the result is the same. If you have updated the SDK, check Google Maven to see what versions of the package are available for the new version of the SDK you want to update. Android has switched to AndroidX. To find the installedSdkVersion and buildToolsVersion builds, go to Tools > SDK Manager. 5: Run the campaign. But if I just use com.android.support:appcompat-v7:28, without .+ I get an error: just without the .+ ending. 6: My problem was simply the network connection. 9: in build.gradle the version of the belows line must be the same com.android.support:appcompat-v7: 28.0.0-alpha1 Implementation com.android.support:design: 28.0.0. Good luck! Related Tags: Just change it to one or the other or what it was before, i.e. .+, which means any version before the major version 28.> Error: more than one library with package name 'android.support.graphics.drawable" Error Photo Finally I tried to change "appcompat-v7:28.+ " to "appcompat-v7:27" and it works but still tell me that i should use the same library to avoid mistakes This is my Gradle code: apply plugin: 'com.android.application' android { compileSdkVersion 28 buildToolsVersion "28.0.1" defaultConfig { applicationId 'com.example.aimlive.myapplication' minSdkVersion 15 targetSdkVersion 28 versionCode 1 versionName "1.0" testInstrumentationRunner "android.support.test.runner.AndroidJUnitRunner" } buildTypes { release { minifyEnabled false proguardFiles getDefaultProguardFile('proguard-android.txt'), 'proguard-rules.pro' } } } dependencies { compile fileTree(dir: 'libs', include: ['*.jar']) androidTestCompile('com.android.support.test.espresso:espresso-core:2.2.2', { exclude group: 'com.android.support', module: 'support-annotations' }) compile 'com.android.support:appcompat-v7:28.+ ' testCompile 'junit:junit:4.12' } Uncategorized 2021-01-13 By tyui 0 Comments Development issue/problem: When I use com.android.support:appcompat-v7:28.+ in the build.gradle(module) of my project, it works without error. I had these additions (on version 27): Implementierung 'com.android.support:appcompat-v7:27.1.1' Implementierung 'com.android.support:design:27.1.1' Implementierung 'com.android.support:recyclingview-v7:27.1.1' Implementierung 'com.android.support:cardview-v7:27.1.1' Implementierung 'com.android.support:support-v4:27.1.1' Implementierung 'com.android.support:support-v4:27.1.1'. Using a VPN solved the problem.
